Company presentation

THE DISTRIBUTION OF OUR APPLICATIONS ON THE COUNTRY

Datakey is a software engineering company, founded in 1985. It consists of professionals with over ten years of experience in the creation of information systems which require the use of advanced technologies.

Datakey is able to provide a wide range of information technology and outsourcing Web based products and services.

Datakey offers complete assistance to its clients, from the development and maintenance of ad-hoc procedures to the production of results and statistics.

Datakey can count on a series of well tested and perfectly integrated Web based products after years of constant development and implementation.

Introduction

Datakey deals with software design and implementation supporting its clients in the start-up and development of solutions and projects. In addition, Datakey offers outsourcing services connected to the development, management and elaboration of information using specific tools and personalized procedures. Thanks to its collaboration with institutional partners and “vertical” procedures and products, Datakey can now pride itself of a “suite” of products and services based on Web platforms. These are perfectly integrated and extremely flexible. Datakey extrapolates and interprets data in various formats coming from different procedures and devices in order to obtain their best integration and use according to the clients' needs .
